PUNEETH KUMAR

Senior Android Developer | Android Application Developer | Kotlin
+91 7674823065 | kpuneethkumar450@gmail.com
LinkedIn: linkedin.com/in/puneeth-builds-android | Availability: Immediate joiner

SUMMARY

Senior Android Developer with 9 years of experience designing, building, testing and maintaining native Android applications in Kotlin and Java. Covers the full mobile application lifecycle: Jetpack Compose and XML UI, MVVM and Clean Architecture, navigation and deep linking, in-app search, push notifications and customer communications, authentication and session handling, REST integration, Room and offline data, automated testing, CI/CD, and Google Play release management. Experienced in modernising legacy Android applications to Jetpack Compose and current architecture practice, and in troubleshooting production issues through crash, ANR and root-cause analysis. Has shipped AI-powered features on mobile, including live speech-to-text transcription and AI meeting summaries. Uses Claude daily for code generation and code review, and for refactoring, testing and documentation. Has led teams of 3 to 7 engineers and worked closely with product managers, designers and distributed engineering teams.

TECHNICAL SKILLS

Languages: Kotlin, Java, XML, Dart

Android & Jetpack: Android SDK, Jetpack Compose, XML Layouts, ViewModel, LiveData, StateFlow, SharedFlow, Room, Lifecycle Components, WorkManager, Android Studio, Gradle, Build Variants & Product Flavors, Responsive Layouts

Architecture & Patterns: MVVM, Clean Architecture, Dependency Injection (Hilt / Dagger)

Asynchronous: Kotlin Coroutines, Flow, StateFlow, SharedFlow, LiveData

APIs & Data: Retrofit, REST API Integration, API Error Handling, MQTT, Room, SQLite, Offline Capability & Caching, Data Sync

Security: JWT / Token-Based Authentication, Token Refresh Handling, Secure Session Management, Encrypted Local Storage (EncryptedSharedPreferences / Android Keystore)

Testing: JUnit, Mockito, MockK, Compose UI Testing, Unit Testing

AI Product Integration: Live Transcription / Speech-to-Text, AI Meeting Summaries, Streaming Model Responses, Partial Result Rendering, AI API Integration on Mobile

AI-Assisted Engineering: Claude for code generation and code review; prompt engineering for refactoring, test generation and technical documentation; LLM-assisted development workflows

Performance & Stability: Crash & ANR Debugging, Root-Cause Analysis, App Start-Up and Load-Time Optimisation, Memory Optimisation, Firebase Crashlytics

Production Support: L3 Application Support, Incident Triage, Log and Crash Report Analysis, Root-Cause Analysis, Hotfix and Rollback Support, Post-Release Validation

CI/CD & Release: GitHub Actions, Google Play Console, App Signing, Versioning, Staged Rollouts, Release Automation, Play Store Publishing

Tools & Process: Git and branching strategies, GitHub, GitLab, Jira, Agile / Scrum, Code Review, Architecture Discussions, Technical Documentation, Mentoring

PROFESSIONAL EXPERIENCE

AlgoFrame Private Limited | Senior Android Developer | Jan 2025 to Aug 2026 | Bengaluru, India

Algomeet, a real-time meeting platform comprising a Meeting SDK and mobile application. Play Store: play.google.com/store/apps/details?id=in.algoframe.algomeet

- Led a team of 4 Android engineers building, enhancing, and maintaining the Algomeet Meeting SDK, supporting high-concurrency calls with reliable connection success and low call-drop rates.
- Built the app's navigation architecture with Jetpack Navigation, including deep links that route users straight into meeting and account flows from notifications and shared links.
- Implemented in-app search with query handling, filtering, and result, empty and error states.
- Implemented push notifications on FCM — notification channels, deep-linked payloads, and foreground and background delivery handling — covering meeting reminders and customer communications.
- Shipped user adoption and engagement features instrumented with Firebase Analytics, tracking feature usage and funnels to guide product iteration.
- Built the client-side AI meeting features — live transcription (speech-to-text) rendered in real time during calls and AI-generated summaries and notes surfaced post-call — integrating streaming transcription APIs with partial and final result handling, incremental UI rendering, and graceful degradation when a model call fails or times out.
- Monitored production stability using Firebase Crashlytics and analytics, triaging crashes and ANRs, performing root-cause analysis, and driving permanent fixes to sustain 98% crash-free sessions.
- Designed and owned a GitHub Actions CI/CD pipeline running automated builds and tests on every pull request, reducing manual release effort from 4 hours to 2 hours per release.
- Owned end-to-end Google Play Store release management including app signing, versioning, staged rollouts, hotfixes, and post-release validation.
- Implemented Hilt dependency injection and Retrofit-based REST API integration across the SDK and application; ran code reviews, contributed to architecture and design decisions, and maintained technical documentation for the team.

Longsage Group | Senior Software Engineer | Jan 2023 to Dec 2024 | Makati, Philippines

Live-streaming and gaming platform featuring large-scale games, live scoring, and live video.

- Led a team of 7 engineers building the Android client for a large-scale live-streaming platform, using ExoPlayer/Media3 for playback.

- Delivered the application UI in Jetpack Compose on an MVVM architecture with Hilt dependency injection.
- Shipped a real-time live-scoring feature pushing score updates to clients within 2 seconds.
- Established an automated testing pipeline with JUnit and Mockito that reduced bug-related release delays by 30%.
- Mentored junior Android developers and authored technical documentation covering architecture and operations; participated in Agile ceremonies across a distributed team.

I-Exceed Technology Solutions Private Limited | Senior Software Engineer | Aug 2021 to Oct 2022 | Bengaluru, India

AppZillon, an enterprise digital banking platform serving leading banks and financial institutions.

- Led a team of 3 Android engineers modernising a legacy XML view-based UI to Jetpack Compose and current architecture standards.
- Implemented JWT token-based authentication with refresh handling, and secured local data using encrypted storage backed by the Android Keystore.
- Integrated Hilt for dependency injection across the application.
- Applied Coroutines and Flow for asynchronous handling, improving responsiveness across the application.
- Designed Room database structures supporting robust offline data management and sync.
- Trained new developers on company coding standards, Android best practices, and documentation standards.

TriokaSoftware Private Limited | Software Developer | Aug 2016 to Jul 2021 | India

Product company building ReachUs, a real-time chat and social networking application. Company closed in 2021 due to the COVID-19 pandemic.

- Owned Android development on ReachUs across 5 years, building the application from the ground up through to a feature-complete internal build.
- Developed the real-time messaging layer in Java and Kotlin, implementing client-to-client chat over the MQTT protocol with persistent connections and delivery acknowledgement.
- Designed SQLite and Room database structures supporting full offline functionality, keeping message and profile history available without connectivity.
- Integrated Firebase Crashlytics and user-activity tracking into test builds for stability and behaviour monitoring during development.
- Progressed from Software Developer to owning Android architecture decisions and build delivery for the product.

PRODUCTION SUPPORT & APPLICATION STABILITY

- Triaged incoming production incidents by severity and user impact, using crash clustering and analytics to prioritise which defects were fixed immediately versus scheduled into a sprint.
- Investigated and resolved production incidents on live applications, analysing crash reports, logs, analytics, and user-reported issues to identify the underlying cause rather than the symptom.
- Performed root-cause analysis on crashes, ANRs, and performance regressions, implementing permanent fixes and preventive changes; sustained 98% crash-free sessions.
- Supported releases end to end, including hotfixes, staged rollout monitoring, rollback readiness, and post-release validation on Google Play.
- Coordinated with backend, QA, and product teams during incidents, and maintained technical documentation and troubleshooting notes for the team.

PROJECTS

GeoKiks | Geo-Social Video Network | Android Developer | 2024

Play Store: play.google.com/store/apps/details?id=com.geokiks.geokiks

- Developed core features from scratch, including map and location-based discovery, video upload and playback, and real-time alerts.
- Published application reached 50,000+ downloads and a 4.1-star rating across 67 reviews on the Google Play Store.

WooHoo | AI-Enabled Digital Voice Assistant (Enterprise SaaS) | Android Developer | 2024

Enterprise voice-assistant platform for hospitality, handling guest requests through a self-service device.

- Built the Android UI layer for the guest-facing assistant, covering request flows, response states, and error handling.
- Implemented voice transcription (speech-to-text) integration, converting spoken guest requests into structured queries for the assistant backend.
- Integrated the app with REST APIs powering the assistant response engine, handling latency and failure states for live guest interactions.

EDUCATION

Bachelor of Technology (B.Tech), Electronics and Communication Engineering (ECE) — Priyadarshini College of Science & Technology, Andhra Pradesh, India | Graduated June 2015
