

PUNEETH KUMAR

Bengaluru, Karnataka, India | +91 7674823065 | kpuneethkumar450@gmail.com | [LinkedIn](#)

SUMMARY

Senior Android Developer with 10 years of experience building scalable, high-performance mobile applications in Kotlin. Hands-on experience owning real-time communication systems (Meeting SDK), live-streaming platforms at scale, CI/CD pipeline ownership, and end-to-end Google Play Store release management. Strong background in Jetpack Compose, MVVM architecture, and dependency injection (Hilt/Dagger).

EXPERIENCE

AlgoFrame Private Limited — Senior Android Developer

Jan 2025 – Present

AlgoMeet — a real-time meeting platform (Meeting SDK + mobile app) — and Qianlima VPN, a secure-connection VPN app

[AlgoMeet on Google Play](#) | [Qianlima VPN on Google Play](#)

- Led a team of 4 engineers in building and maintaining AlgoMeet's Meeting SDK, supporting 80+ concurrent participants per call with a 95% connection success rate (under 5% call drop rate)
- Built core app UI using Jetpack Compose, ensuring a modern, maintainable codebase
- Engineered adaptive bitrate video streaming up to 1080p resolution with end-to-end latency under 150ms; the platform has hosted hundreds of meetings
- Redesigned core UI/UX flows, reducing UI-related support tickets by up to ~50/month while maintaining 98% crash-free sessions
- Built and owned a GitHub Actions CI/CD pipeline with automated build and test execution on every pull request, cutting manual release time from 4 hours to 2 hours
- Owned end-to-end Google Play Store release management for both apps, including app signing, staged rollouts, and Play Console administration
- Implemented Hilt for dependency injection across both applications

Longsage Group (Makati, Philippines) — Senior Software Engineer

Jan 2023 – Dec 2024

Live-streaming and gaming platform featuring large-scale games, live scoring, and live video

- Led a team of 7 engineers, designing and scaling live-streaming infrastructure that supported up to 72,000 concurrent viewers at 96% uptime
- Built the application UI in Jetpack Compose
- Built a real-time live-scoring feature delivering score updates within 2 seconds
- Implemented an automated testing pipeline that reduced bug-related delays by 30% and improved overall code quality by 20%
- Applied Hilt for dependency injection within an MVVM architecture
- Mentored junior developers and authored technical documentation covering application functionality and operations

Freelance Android Developer — Concurrent with Longsage Group

2024

- GeoKiks (Geo-Social Video Network): Built core features from scratch — map/location-based discovery, video upload & playback, and real-time alerts. Published app reached 4.1★ across 67 reviews with 50,000+ downloads on the Google Play Store

[GeoKiks on Google Play](#)

- WooHoo (Home Automation AI Assistant, SaaS): Built UI screens and a voice transcription feature for a home-automation assistant platform

I-Exceed Technology Solutions Private Limited — Senior Software Engineer

Aug 2021 – Oct 2022

AppZillon — a digital banking platform for leading banks and financial institutions

- Led a team of 3 Android engineers, migrating legacy view-based UI to Jetpack Compose
- Improved app load time by approximately 40% through performance optimization, and reduced ANR occurrences
- Integrated ApolloClient (GraphQL) for efficient data fetching and Hilt for dependency injection

- Implemented Coroutines and Flow for asynchronous handling, improving responsiveness across the app
- Built Room database structures to support robust offline data management
- Trained new developers on company coding standards and best practices

TriokaSoftware Private Limited — Software Developer

Aug 2016 – Jul 2021

Early-stage startup building a real-time mobile chat application (company closed in 2021 due to the COVID-19 pandemic)

- Built a real-time chat application using Java and Kotlin with MVP architecture, implementing client-to-client messaging via the MQTT protocol
- Implemented SQLite and Room database structures to support offline functionality
- Integrated Firebase Crashlytics and user-activity tracking

SKILLS

Languages & Frameworks: Kotlin, Java, Jetpack Compose, Android SDK, MVVM, MVP

Architecture & Async: Coroutines & Flow, LiveData & StateFlow, Hilt/Dagger (DI), Room, SQLite

Networking: Retrofit, ApolloClient (GraphQL), MQTT

Release & CI/CD: GitHub Actions, Google Play Console (app signing, staged rollouts), Fastlane-style release automation

Tools & Platforms: Android Studio, Git/GitHub/GitLab, Firebase (Crashlytics, FCM), Postman, JUnit, Mockito, Jira

Methodology: Agile / Scrum

EDUCATION

Bachelor of Technology, Priyadarshini College of Science & Technology, AP, India

June 2015
